I wanted to install macOS High Sierra on a virtual machine on my Mac so that I could debug some issues.. When I use the Parallels Wizard to create a new VM, I selected the Install macOS Sierra.. app application as listed

1. [parallels sierra](#)
2. [parallels high sierra](#)
3. [parallels 15 high sierra](#)

The host machine is running macOS and the guest VM would be running macOS as well.. Trying to install the official version of macOS Sierra, released today 2016-09-20.
